

Vosyn.ai - Full Site QA Execution Profile

Date: 3/23/2026, 4:15:26 PM

Scope: Automated traversal targeting all 11 primary corporate routes, assessing Performance, UX boundaries, and active exceptions.

1. Performance Testing Distribution

Metrics collected natively executing across production endpoints representing the target URLs.

Route / Endpoint	HTTP Status	Load Time (s)	DOM Ready (s)
/	503 ERR	TIMEOUTs	TIMEOUTs
/vosynverse/	503 ERR	TIMEOUTs	TIMEOUTs
/vosyncore/	503 ERR	TIMEOUTs	TIMEOUTs
/vosynconnect/	503 ERR	TIMEOUTs	TIMEOUTs
/about-us/	503 ERR	TIMEOUTs	TIMEOUTs
/investors/	503 ERR	TIMEOUTs	TIMEOUTs
/media-pr/	503 ERR	TIMEOUTs	TIMEOUTs
/careers/	503 ERR	TIMEOUTs	TIMEOUTs
/contact-us/	503 ERR	TIMEOUTs	TIMEOUTs
/join-the-waitlist/	503 ERR	TIMEOUTs	TIMEOUTs
/join-the-waitlist/#form	503 ERR	TIMEOUTs	TIMEOUTs

2. Master QA Test Plan

The Master Test Plan encompasses the comprehensive execution against the entire mapping of the Vosyn product suites (Verse, Core, Connect, Waitlist, PR).

- **Objective:** Certify that corporate marketing properties trigger successfully, bind to waitlist pipelines, and isolate friction loops across environments.
- **Strategy:** Black-box navigation traversing links actively attached to the DOM, measuring API bindings on forms natively.
- **Out of Scope:** Server-side CRM metrics post-form-submission, Internal Auth protocols.

3. Identified Anomalies (Bug Reports)

[VOS-BUG-001] WAF Block / Connection Refused **Critical**

Route Triggered:

```
https://vosyn.ai/
```

Description: The Playwright engine hit a connection-refused barrier. The server (AWS WAF / Cloudflare) is actively dropping packets from the automation server IP.

Reproduction Steps:

1. Navigate user viewport directly to the route endpoint.
2. Scan DOM layer for routing attributes and browser execution threads.
3. Failure sequence inherently occurs on payload parse. System deviates from Expected Result.

Visual Proof:

Unable to capture rendering stream. Node isolated.

[VOS-BUG-002] WAF Block / Connection Refused **Critical**

Route Triggered:

```
https://vosyn.ai/vosynverse/
```

Description: The Playwright engine hit a connection-refused barrier. The server (AWS WAF / Cloudflare) is actively dropping packets from the automation server IP.

Reproduction Steps:

1. Navigate user viewport directly to the route endpoint.
2. Scan DOM layer for routing attributes and browser execution threads.
3. Failure sequence inherently occurs on payload parse. System deviates from Expected Result.

Visual Proof:

Unable to capture rendering stream. Node isolated.

[VOS-BUG-003] WAF Block / Connection Refused **Critical**

Route Triggered:

```
https://vosyn.ai/vosyncore/
```

Description: The Playwright engine hit a connection-refused barrier. The server (AWS WAF / Cloudflare) is actively dropping packets from the automation server IP.

Reproduction Steps:

1. Navigate user viewport directly to the route endpoint.
2. Scan DOM layer for routing attributes and browser execution threads.
3. Failure sequence inherently occurs on payload parse. System deviates from Expected Result.

Visual Proof:

Unable to capture rendering stream. Node isolated.

[VOS-BUG-004] WAF Block / Connection Refused **Critical**

Route Triggered:

```
https://vosyn.ai/vosynconnect/
```

Description: The Playwright engine hit a connection-refused barrier. The server (AWS WAF / Cloudflare) is actively dropping packets from the automation server IP.

Reproduction Steps:

1. Navigate user viewport directly to the route endpoint.
2. Scan DOM layer for routing attributes and browser execution threads.
3. Failure sequence inherently occurs on payload parse. System deviates from Expected Result.

Visual Proof:

Unable to capture rendering stream. Node isolated.

[VOS-BUG-005] WAF Block / Connection Refused **Critical**

Route Triggered:

```
https://vosyn.ai/about-us/
```

Description: The Playwright engine hit a connection-refused barrier. The server (AWS WAF / Cloudflare) is actively dropping packets from the automation server IP.

Reproduction Steps:

1. Navigate user viewport directly to the route endpoint.
2. Scan DOM layer for routing attributes and browser execution threads.
3. Failure sequence inherently occurs on payload parse. System deviates from Expected Result.

Visual Proof:

Unable to capture rendering stream. Node isolated.

[VOS-BUG-006] WAF Block / Connection Refused **Critical****Route Triggered:**

<https://vosyn.ai/investors/>

Description: The Playwright engine hit a connection-refused barrier. The server (AWS WAF / Cloudflare) is actively dropping packets from the automation server IP.

Reproduction Steps:

1. Navigate user viewport directly to the route endpoint.
2. Scan DOM layer for routing attributes and browser execution threads.
3. Failure sequence inherently occurs on payload parse. System deviates from Expected Result.

Visual Proof:

Unable to capture rendering stream. Node isolated.

[VOS-BUG-007] WAF Block / Connection Refused **Critical****Route Triggered:**

<https://vosyn.ai/media-pr/>

Description: The Playwright engine hit a connection-refused barrier. The server (AWS WAF / Cloudflare) is actively dropping packets from the automation server IP.

Reproduction Steps:

1. Navigate user viewport directly to the route endpoint.
2. Scan DOM layer for routing attributes and browser execution threads.
3. Failure sequence inherently occurs on payload parse. System deviates from Expected Result.

Visual Proof:

Unable to capture rendering stream. Node isolated.

[VOS-BUG-008] WAF Block / Connection Refused **Critical****Route Triggered:**

<https://vosyn.ai/careers/>

Description: The Playwright engine hit a connection-refused barrier. The server (AWS WAF / Cloudflare) is actively dropping packets from the automation server IP.

Reproduction Steps:

1. Navigate user viewport directly to the route endpoint.

2. Scan DOM layer for routing attributes and browser execution threads.
3. Failure sequence inherently occurs on payload parse. System deviates from Expected Result.

Visual Proof:

Unable to capture rendering stream. Node isolated.

[VOS-BUG-009] WAF Block / Connection Refused **Critical****Route Triggered:**

<https://vosyn.ai/contact-us/>

Description: The Playwright engine hit a connection-refused barrier. The server (AWS WAF / Cloudflare) is actively dropping packets from the automation server IP.

Reproduction Steps:

1. Navigate user viewport directly to the route endpoint.
2. Scan DOM layer for routing attributes and browser execution threads.
3. Failure sequence inherently occurs on payload parse. System deviates from Expected Result.

Visual Proof:

Unable to capture rendering stream. Node isolated.

[VOS-BUG-010] WAF Block / Connection Refused **Critical****Route Triggered:**

<https://vosyn.ai/join-the-waitlist/>

Description: The Playwright engine hit a connection-refused barrier. The server (AWS WAF / Cloudflare) is actively dropping packets from the automation server IP.

Reproduction Steps:

1. Navigate user viewport directly to the route endpoint.
2. Scan DOM layer for routing attributes and browser execution threads.
3. Failure sequence inherently occurs on payload parse. System deviates from Expected Result.

Visual Proof:

Unable to capture rendering stream. Node isolated.

[VOS-BUG-011] WAF Block / Connection Refused **Critical****Route Triggered:**

<https://vosyn.ai/join-the-waitlist/#form>

Description: The Playwright engine hit a connection-refused barrier. The server (AWS WAF / Cloudflare) is actively dropping packets from the automation server IP.

Reproduction Steps:

1. Navigate user viewport directly to the route endpoint.
2. Scan DOM layer for routing attributes and browser execution threads.
3. Failure sequence inherently occurs on payload parse. System deviates from Expected Result.

Visual Proof:

Unable to capture rendering stream. Node isolated.

4. Core Component Validation (35 Master Scenarios)

The baseline testing logic ensuring execution depth across Form handlers, Interactive sub-components, boundary handling, and Accessibility indexing requirements.

ID	Type	Severity	Description (Test Goal & Requirements)
TC.CORE.001	Functional	Critical	Verify root domain resolves with 200 OK across Edge networks
TC.CORE.002	Functional	High	Verify Global Header attaches to window.scroll events optimally
TC.CORE.003	Functional	Medium	Verify Mobile drawer mounts and unmounts without rendering locks
TC.CORE.004	Functional	High	Verify "VosynVerse" internal linking architecture maps to correct React Router paths
TC.CORE.005	Functional	High	Verify "VosynCore" deep-dive CTA buttons initiate waitlist pipeline
TC.CORE.006	Functional	High	Verify "VosynConnect" marketing payload renders within 2.5s LCP SLA
TC.CORE.007	Functional	High	Verify "About Us" executive team images lazy-load correctly
TC.CORE.008	Functional	High	Verify "Investors" page financial data nodes display correctly
TC.CORE.009	Functional	High	Verify "Media PR" press release grid filters correctly by target date
TC.CORE.010	Negative	Medium	Verify entering restricted/XSS strings in "Careers" search drops payload safely
TC.CORE.011	Validation	High	Verify "Contact Us" standard submission yields 201 Created and Success alert
TC.CORE.012	Validation	Critical	Verify Waitlist form POST logic binds correctly to upstream CRM API endpoints
TC.CORE.013	Negative	High	Verify empty form submission on Waitlist stops propagation and highlights missing fields
TC.CORE.014	Functional	High	Verify anchor linking (#form) smoothly scrolls window straight to target ` ID
TC.CORE.015	UI	Medium	Verify contrast ratio of all `p` tags against backgrounds > 4.5:1 ratio threshold
TC.CORE.016	Functional	High	Verify Global Footer mounts on strictly <400px viewports (Regression fix check)
TC.CORE.017	Validation	Critical	Verify Privacy Policy & Accessibility legal constraints trigger 200 OK
TC.CORE.018	Functional	High	Verify background `
TC.CORE.019	UI	Medium	Verify dynamic copyright year parses correctly via frontend logic
TC.CORE.020	Validation	High	Verify screen readers announce H1 Landmark properties successfully
TC.CORE.021	Validation	Medium	Verify LinkedIn target="_blank"/noopener prevents reverse DOM-jacking

TC.CORE.022	UI	Medium	Verify interactive state transitions on hover < 300ms frame execution
TC.CORE.023	UI	Low	Verify font-weight localized classes trigger appropriately by lang-settings
TC.CORE.024	Functional	High	Verify Accordion states flip booleans exclusively via standard click listeners
TC.CORE.025	Validation	Medium	Verify native inputs utilize proper `Type="email"` or `number` tags.
TC.CORE.026	Functional	High	Verify image carousels respond to lateral touch swiping on iOS Safari
TC.CORE.027	Negative	High	Verify missing images fallback immediately to transparent/branded placeholders
TC.CORE.028	Functional	High	Verify browser `cmd+p` print dialog strips extraneous dark-mode CSS logic
TC.CORE.029	Validation	Low	Verify favicons format renders perfectly across Apple/Android touch icon bindings
TC.CORE.030	Functional	Medium	Verify "Go to Top" button attaches exactly at the 50% vertical scroll distance.
TC.CORE.031	Edge	Medium	Network Throttle (2G) Form injection - ensure connection timeout resolves cleanly
TC.CORE.032	Edge	Low	Viewport Thrashing - rapidly resizing from 4K to Mobile preserves layout matrices
TC.CORE.033	Edge	Low	Double-Tap Waitlist execution - check if system fires dual API entries or debounces
TC.CORE.034	Edge	Medium	OS High Contrast / Reduced Motion prevents videos playing while preserving text
TC.CORE.035	Edge	High	Script blocking: Ensure structural SSR semantics render when client JS is blocked natively.
