

Vosyn.ai - 11-Route Performance Matrix

Date: 3/20/2026, 11:02:03 AM | **Target:** Production Content Delivery Network

A native Lighthouse/Playwright infrastructure sweep executing cross-site DOM timing APIs sequentially to determine bottleneck pathways.

ROUTE / ENDPOINT	HTTP STATUS	LOAD TIME (S)	DOM READY (S)
/	200 OK	1.33s	0.87s
/vosynverse/	200 OK	2.96s	2.26s
/vosyncore/	200 OK	2.38s	1.91s
/vosynconnect/	200 OK	1.33s	0.75s
/about-us/	200 OK	1.60s	0.64s
/investors/	200 OK	2.77s	1.77s
/media-pr/	200 OK	2.54s	1.85s
/careers/	200 OK	1.68s	0.73s
/contact-us/	200 OK	1.37s	0.57s
/join-the-waitlist/	200 OK	3.10s	2.19s
/join-the-waitlist/#form	200 OK	1.63s	0.60s

Load Optimization Overview

Endpoints averaging < 2.5s are successfully leveraging NextJS/React static pre-rendering caching mechanisms. Peaks on endpoints like /join-the-waitlist might indicate synchronous marketing tag payloads resolving before the visual paint.
