

Vosyn.ai - Master QA Test Plan

1. Scope & Objectives

To perform exhaustive automated regression testing on the vosyn.ai homepage to ensure layout stability, logical routing, semantic accessibility, and responsive behavior across viewports.

2. Functional Areas in Scope

- **Header & Navigation:** Verification of sticky headers, dynamic glassmorphism, mobile burger menu navigation, and dropdown accessibility.
- **Hero Section:** Validating core value-proposition copy ("Break Barriers, Build Connections"), background animation load states, and primary Call-To-Action routing.
- **Features & Content:** Data verification of statistics (90% preference, \$46B lost, 80% enterprise), image loads, and multi-column viewport stacking.
- **Footer Modules:** Validation of all 4 columns, legal links, external social targets, interactive newsletters, and scroll-to-top utilities.

3. Resources & Environment

Framework: Playwright Test (Node.js / TypeScript)

Browsers: Desktop Chromium, Mobile Chrome (Pixel 5 emulated)

4. Test Strategy

Data-driven visual and structural assertions. Exactly 25 critical paths tested per targeted functional area, totaling 100 test cases per deployment.
