

Vosyn.ai - Master Test Plan

Date: 3/20/2026, 11:02:02 AM | **Target:** Full Domain (11 Routes)

1. Objective

Certify that the comprehensive 11-route corporate property functions flawlessly. Marketing interfaces must accurately route to waitlist mechanisms, display core IP components natively, and scale across viewport widths without fragmentation.

2. Technical Methodology

Black-box integration testing utilizing Playwright to map DOM rendering cycles. Extrapolates standard functional, positive, negative, validation, and performance test suites sequentially.

3. Target Definitions

- Scope:** Root domain, /vosynconnect, /vosyncore, /vosynverse, /about-us, /investors, /media-pr, /careers, /contact-us, /join-the-waitlist
- Exclusions:** Native backend databases mapping the waitlist queues, external CRM integrations, Internal Auth protocols.

4. Defect Reporting Protocol

All found anomalous behavior will be tracked with precision **Screenshots** and **Severities** mapped directly from exact DOM rendering matrices (Critical/High/Medium/Low).
